Education

University of California, Irvine Expected June 2028

B.S. Computer Science, Specialization in Intelligent Systems *GPA: 3.8/4.0*

- Awards: Dean's Honor List (3x) | Activities: Data@UCI (50+ mentees), AI@UCI, Cyber@UCI, Hack@UCI

Experience

Amazon Web Services (AWS) Palo Alto, CA

Software Development Engineer Intern *Sept. 2026 – Present*

- Built an LLM agent that pins each Spark 4.1 regression to its exact commit by matching diffs to slowed operators
- Caught **50** regressions at 90% accuracy, cutting debugging from **1–3 hours to 5 minutes** per regression
- Shipped **4 weeks** early, then turned the agent into a standalone API any Amazon engineer can call via Lambda
- Replaced the team's release-baseline checks with night-to-night Welch's t-tests on **1,030** runs, now its primary tool

Tata Consultancy Services (TCS) Pittsburgh, PA

Software Engineer Intern *June 2026 – Aug. 2026*

- Fine-tuned the SmolVLA AI model so a simulated robot arm pours liquid between test tubes (**85.3%** success)
- Showed camera-only SmolVLA matching a reinforcement learning baseline that saw full simulator state (**81.5%**)
- Built a robot-arm pouring simulation in FluidLab in 3 weeks, fixing 3 engine bugs to unblock **1.5 months** of work
- Delivered the dataset and codebase now used by the center's scientists for ongoing lab-automation research

Ready Tutor Irvine, CA

Software Developer Intern *March 2026 – June 2026*

- Extended course search for Course Eater, a UCI planner used by **500+** students that secured **$5,500** in funding
- Cut database writes to **1 per action** by routing 10+ scattered storage calls through a React Context provider
- Shipped **30+** production fixes in TypeScript, including a credit-calculation bug that broke schedule planning

Projects

Chronicle | Python, FastAPI, PostgreSQL, Next.js | chronicles-weld.vercel.app *June 2026 – Sept. 2026*

- Created a job aggregator ingesting **36,000+** open roles directly from 600+ Greenhouse, Lever, and Ashby boards
- Engineered hybrid full-text and pgvector search via reciprocal rank fusion, with **19ms** p95 retrieval in local tests
- Raised recommendation NDCG@10 from **0.58 to 0.81** over rule-based ranking across 24 synthetic user personas
- Lifted pay-extraction accuracy on intern postings from **3.8% to 96.2%** by reading structured ATS pay data first

Forge | Python, PyTorch, TRL, Unsloth | forge-grpo.vercel.app *July 2026 – Sept. 2026*

- Built an end-to-end reinforcement learning pipeline that teaches Qwen2.5-1.5B-Instruct multi-step math reasoning
- Trained a LoRA adapter via GRPO, raising GSM8K pass@1 from **58.8% to 70.0%** with ARC down only 1 point
- Designed 4 verifiable rewards, fixing a zero-reward cold start with a one-shot prompt and a graded format reward
- Exported a 4-bit GGUF **3.15x** smaller than fp16 for Ollama and served base vs. tuned via vLLM multi-LoRA

FacePulse | Python, TensorFlow, OpenCV, React | face-pulse.netlify.app *April 2026 – June 2026*

- Built a real-time computer vision app that classifies 5 emotions, **featured on the Handshake AI Showcase**
- Trained 4 TensorFlow models on FER2013, with a custom CNN (**64.5%**) matching a fine-tuned VGG16 (64.3%)
- Engineered dlib facial-landmark features that lifted an MLP from **43.6% to 51.7%** over raw pixel input

Technical Skills

Languages: Python, Java, C++, C, TypeScript, JavaScript, SQL, Scala, Bash
Machine Learning: PyTorch, TensorFlow, Hugging Face, vLLM, Ollama, Stable-Baselines3, scikit-learn, OpenCV
Data: Apache Spark, PostgreSQL (pgvector), MongoDB, NumPy, Pandas
Cloud & DevOps: AWS (S3, Lambda, ECS, Bedrock), Docker, GitHub Actions, Git
Web & Testing: FastAPI, SQLAlchemy, React, Next.js, Tailwind CSS, pytest
